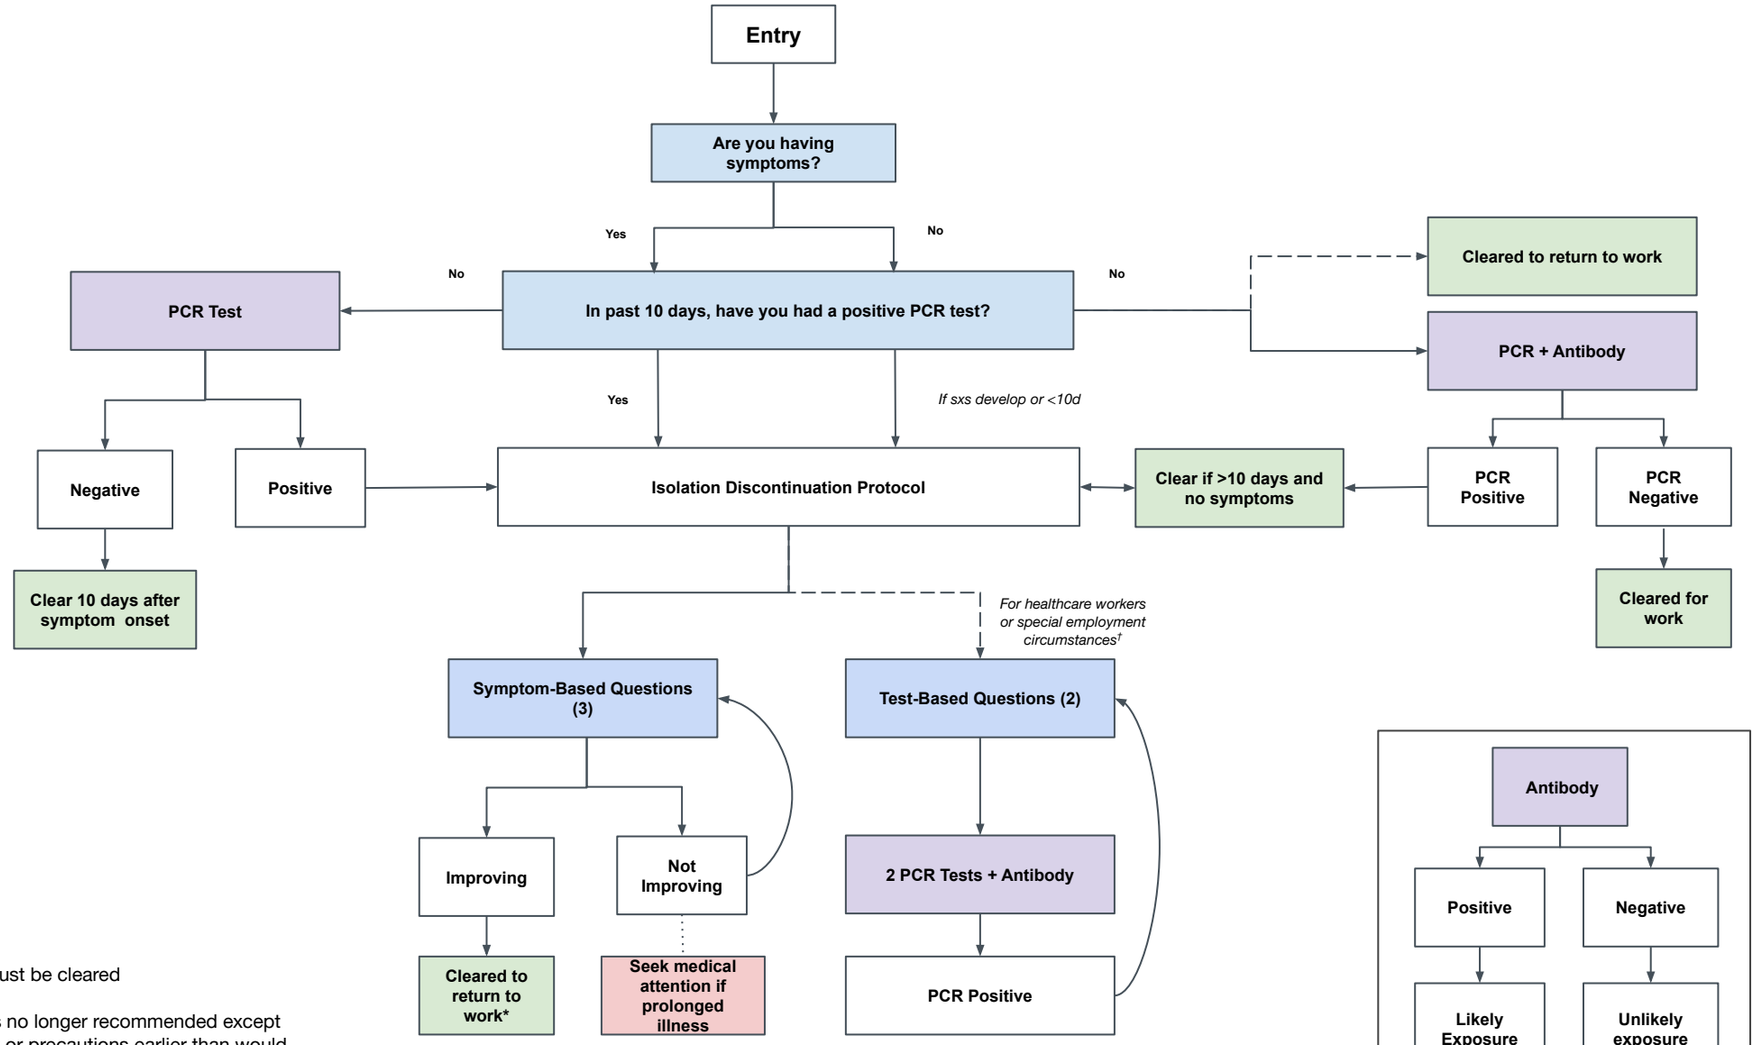
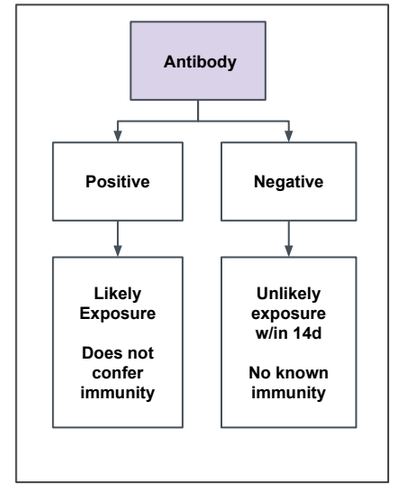
COVID-19 Return to Work Program Workflow (PCR + Antibody)





* Household contact must be cleared

† Test-based strategy is no longer recommended except to discontinue isolation or precautions earlier than would occur under a symptom-based strategy approach. This can be considered to allow healthcare workers with SARS-CoV-2 to return to work earlier than the symptom-based strategy. However, in most cases, the test-based strategy results in prolonged work exclusion of healthcare workers who continue to shed detectable SARS-CoV-2 RNA but are no longer infectious, limiting the utility of this approach.
